Enc.

This is as near as I could tell about the formations as when rining the cutting all go down a head and as I stirred them up to clean them out it is hard to tell which is which after I went through the Brown line the rest of the rock was real hard all the way to the sand and the rock below shale ~~that~~ that was under the sand was real hard.

The only reason that I put in that much 6" casing was because he wanted to put in a sub pump and there was about 15 ft of sand and shale in bottom of the well went I started to drill it deeper and if the kept falling in his pump would last long and don't what you think about 4" liners but I don't
